Instruction: Fill in all blanks and examples. The last page is optional.

Arc Length

Arc Length

Copy Theorem 5, pg 653 If a curve Γ is described by the parametric equations $\begin{cases} x = h(t) \\ y = k(t) \end{cases}$, $\alpha \leq t \leq \beta$, where h'(t) and k'(t) are continuous on $[\alpha, \beta]$ and Γ is traversed exactly once as t increases from α to β , then the length of Γ is L =

Note: Γ is pronounced 'Gamma'.

Example:

Solve the question given in Example 4, pg 653.

Example:

Consider the parametric curve (cycloid) Γ : $\begin{cases} x = 2(\theta - \sin \theta) \\ y = 2(1 - \cos \theta) \end{cases}$ where $0 \le \theta \le 2\pi$. Find the length of Γ .

This is a special case of Example 5, pg 653-654.

Surface Area

| Surface Area |
|---|
| Copy Equation 6, pg 654. If the curve Γ given by the compactive equations $\int x = h(t)$ |
| about the x-axis, where $h'(t)$ and $k'(t)$ are continuous and $k(t) > 0$, then the area of the |
| resulting surface is given by |
| $S_A =$ |

Example:

Solve the question given in Example 6, pg 654.

Example(Optional):

Consider the parametric curve (**cycloid**) Γ : $\begin{cases} x = 2 (\theta - \sin \theta) \\ y = 2 (1 - \cos \theta) \end{cases}$ where $0 \le \theta \le 2\pi$. Find the surface area formed by rotating Γ about the x-axis.
