Consistent or inconsistent?

 ζ_o :

Fact: A system of linear equations has

- 1. no solutions, or the system is inconsistent
- 2. exactly one solution, or } the system is consistent 3. infinitely many solutions

The augmented matrix of the system (*) is (Cort Sol)
$$\frac{79^2}{5}$$

$$\begin{bmatrix}
1 - 2 & -1 & 3 & 1 \\
2 & -4 & 1 & 0 & 5 \\
1 & -2 & 2 & -3 & 4
\end{bmatrix}$$
Row reduce:

An echelon form of the augmented matrix gives us enough information to conclude that the system is <u>consistent</u>

Since an echelon form of the augmented matrix has no such row, the system (*) is consistent.

meaning there exist x1, x2, x3, x4 satisfying (*)

Optional: Continue to row reduce to obtain the unique reduced echelon form:

* leading entry in each nonzero row is 1
$$\begin{bmatrix} 1 & -2 & -1 & 3 & 1 \\ 0 & 0 & 1 & -2 & 1 \\ 0 & 0 & 0 & 0 & 0 \end{bmatrix}$$
 * Each leading 1 is the only nonzero entry in its column

Consider the matrix $A = \begin{bmatrix} 1 & -2 & -1 & 3 \\ 2 & -4 & 1 & 0 \\ 1 & -2 & 2 & -3 \end{bmatrix}$

Is $\begin{bmatrix} 1 \\ 5 \\ 4 \end{bmatrix}$ in the subset of \mathbb{R}^3 spanned by the columns of A? Why/why not? Let $\overline{\nabla}_1 = \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}$ $\overline{\nabla}_2 = \begin{bmatrix} -2 \\ -4 \\ -2 \end{bmatrix}$ $\overline{\nabla}_3 = \begin{bmatrix} -1 \\ 1 \\ 2 \end{bmatrix}$ $\overline{\nabla}_4 = \begin{bmatrix} 3 \\ 0 \\ -3 \end{bmatrix}$

The subset of \mathbb{R}^3 spanned (or generated) by the columns of A denoted Span $(\vec{v}_1, \vec{v}_2, \vec{v}_3, \vec{v}_4)$ is the collection of vectors that can be written in the form

 C_1 $\overrightarrow{V_1}$ + C_2 $\overrightarrow{V_2}$ + C_3 $\overrightarrow{V_3}$ + C_4 $\overrightarrow{V_4}$ } Called linear combinations of $\overrightarrow{V_1}$, $\overrightarrow{V_2}$, $\overrightarrow{V_3}$, $\overrightarrow{V_4}$ with C_1 , C_2 , C_3 , C_4 scalars

Since system (*) is consistent, there exist C_1, C_2, C_3, C_4 such that C_1, C_2, C_3, C_4

So $\begin{bmatrix} 1\\5\\4 \end{bmatrix}$ is a linear combination of $\vec{v_1}, \vec{v_2}, \vec{v_3}, \vec{v_4}$.

Thus $\begin{bmatrix} 1\\5\\4 \end{bmatrix}$ is in Span (columns of A). (Answer to Q: yes!)

 $0 = 0$

$$\begin{cases} x_1 = 25 - t \\ x_2 = 5 \\ x_3 = 2t \\ x_4 = t \\ \text{for all choices for 5, t} \end{cases}$$

or
$$\bar{X} = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \\ x_4 \end{bmatrix} = J \begin{bmatrix} 2 \\ 1 \\ 0 \\ 0 \end{bmatrix} + t \begin{bmatrix} -1 \\ 0 \\ 2 \\ 1 \end{bmatrix}$$

for all choices for J , t

C) Does $\overrightarrow{A} \overrightarrow{X} = \overrightarrow{D}$ have a nontrivial solution?

Pg 5/5

Yes, e.g., set
$$x_2=3$$
 and $x_4=0$ $\overline{x}=3\begin{bmatrix}2\\1\\0\\0\end{bmatrix}+0\begin{bmatrix}-1\\0\\2\\1\end{bmatrix}=\begin{bmatrix}6\\3\\0\\0\end{bmatrix}$

is a nontrivial solution

Fact: A homogeneous linear system has at least one solution, $\vec{X} = \vec{O}$ called the trivial solution

A non-trivial solution is a nonzero vector & that satisfies Ax=0

(7) Sec 1.7 Linear independence

Let
$$\overrightarrow{V}_1 = \begin{bmatrix} 1 \\ 2 \\ 1 \end{bmatrix}$$
, $\overrightarrow{V}_2 = \begin{bmatrix} -2 \\ -4 \\ -2 \end{bmatrix}$, $\overrightarrow{V}_3 = \begin{bmatrix} -1 \\ 1 \\ 2 \end{bmatrix}$, $\overrightarrow{V}_4 = \begin{bmatrix} 3 \\ 0 \\ -3 \end{bmatrix}$

(a) Determine whether the set $\{\vec{v}_1, \vec{v}_2, \vec{v}_3, \vec{v}_4\}$ is linearly dependent.

Fact
The columns of a matrix A are linearly independent

iff the matrix equation $\overrightarrow{A} = \overrightarrow{D}$ has only the trivial

Solution $\overrightarrow{X} = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$

Since $A\hat{x}=\bar{0}$ has nontrivial solutions, the columns of A are not linearly independent (they are dependent)

- (b) Determine by inspection whether $\{\vec{v}_1, \vec{v}_2, \vec{v}_3, \vec{v}_4\}$ is linearly dependent.
 - I notice that $-2\vec{v}_1 = \vec{v}_2$, so $2\vec{v}_1 + \vec{v}_2 + 0\vec{v}_3 + 0\vec{v}_4 = \vec{0}$
 - This means that the set $\{\vec{v_1}, \vec{v_2}, \vec{v_3}, \vec{v_4}\}$ is linearly dependent by definition.
