# (For students comfortable with $\text{\LaTeX}$ ) Drawings with TikZ

- ▶ TikZ is a package for drawing figures in  $\text{\LaTeX}$ .
- ▶ It defines a powerful drawing language inside  $\text{\LaTeX}$ . Short programs can draw surprisingly complicated things.

- ▶ We'll start with simple things. To draw a line in TikZ:

```
\begin{tikzpicture}  
\draw (0,0) -- (1,1); % a line  
\end{tikzpicture}
```

## (For students comfortable with $\text{\LaTeX}$ ) Drawings with TikZ: Coordinates

- ▶ The default coordinates are centimeters, with the usual sense:

- ▶ It helps to draw a grid when you are working with TikZ:

```
\begin{tikzpicture}  
\draw[help lines] (0,0) grid (3,3);  
\end{tikzpicture}
```

## (For students comfortable with $\text{\LaTeX}$ ) Drawings with TikZ: Lines

- ▶ Arrow heads and line styles are specified as options to the `\draw` command.
- ▶ End each draw command with a `;` semicolon.

```
\begin{tikzpicture}  
\draw[help lines] (0,0) grid (3,3);  
\draw[->] (0,0) -- (1,1);  
\draw[<->, thick] (2,1) -- (1,2);  
\draw[<- , thick, dashed] (2,2)--(3,3);  
\end{tikzpicture}
```

# (For students comfortable with $\text{\LaTeX}$ ) Drawings with TikZ: Paths

- ▶ You can specify multiple points to form a path.
- ▶ Arrows will appear only at the ends of the path.

```
\begin{tikzpicture}
\draw[help lines] (0,0) grid (3,3);
% axes:
\draw[<->, thick] (0,3)--(0,0)--(3,0);
% diamond:
\draw (1.5,0.5) -- (2.5,1.5) --
      (1.5,2.5) -- (0.5,1.5) --
      cycle; % close the path
\end{tikzpicture}
```

# (For students comfortable with $\text{\LaTeX}$ ) Drawings with TikZ: Colours

- Colours are also specified as options to `\draw`.

```
\begin{tikzpicture}
\draw[help lines] (0,0) grid (3,3);
% axes
\draw[<->, thick, red]
  (0,3)--(0,0)--(3,0);
% diamond
\draw[thick, blue, fill=yellow]
  (1.5,0.5) -- (2.5,1.5) --
  (1.5,2.5) -- (0.5,1.5) --
  cycle;
\end{tikzpicture}
```

# (For students comfortable with $\text{\LaTeX}$ ) Drawings with TikZ: Shapes

- ▶ TikZ has built-in commands for simple shapes.

```
\begin{tikzpicture}
\draw[help lines] (0,0) grid (3,3);
\draw (1.5,2.0) circle (0.5);
\draw (0.5,0.5) rectangle (2.5,1.5);
\end{tikzpicture}
```

# (For students comfortable with $\text{\LaTeX}$ ) Drawings with TikZ: Nodes & Labels

- ▶ Use nodes to place text (and math) in TikZ drawings.
- ▶ You can also use nodes as coordinates — useful for diagrams.

```
\begin{tikzpicture}
\draw[help lines] (0,0) grid (3,3);
\node (h) at (0,0) {H};
\node (x) at (1.5,1.5) { $\xi$ };
\node (t) at (3,0) {T};
\draw[->] (x) -- (h);
\draw[->] (x) -- (t);
\end{tikzpicture}
```

# (For students comfortable with $\text{\LaTeX}$ ) Drawings with TikZ: Functions

- ▶ You can even plot some simple functions.

```
\begin{tikzpicture}[scale=0.5]
% y axis
\draw[<->, thick] (0,2) -- (0,-2);
% x axis
\draw[ ->, thick] (0,0) -- (7, 0);
% curves
\draw[cyan,domain=0:2*pi]
  plot (\x, {sin(\x r)});
\draw[magenta,domain=0:2*pi]
  plot (\x, {cos(\x r)});
\end{tikzpicture}
```

# (For students comfortable with $\text{\LaTeX}$ ) Drawings with TikZ: Examples

- ▶ Check out [T \$\text{\E}\$ Xample.net](https://www.texample.net) for many TikZ examples:

Figure 1: Gajski-Kuhin Y-chart

## Notes with todonotes

- ▶ The `\todo` command from the `todonotes` package is great for leaving notes to yourself and your collaborators.

```
\todo{add results}  
\todo[color=blue!20]{fix method}
```

- ▶ Pro Tip: define your own commands with `\newcommand`

```
\newcommand{\alice}[1]{\todo[color=green!40]{#1}}  
\newcommand{\bob}[1]{\todo[color=purple!40]{#1}}
```

This can save a lot of typing:

```
\alice{add results}  
\bob{fix method}
```

# Notes with todonotes

- ▶ Only inline notes are supported with beamer, but margin notes are supported for normal documents.
- ▶ There is also a handy `\listoftodos` command.

## Towards the Confusing Unification of Rasterization and Local-Area Networks in State Machines

Alice Bob, Carol David, Edward Fredrick

### Todo list

■ Are they polynomial time? . . . . .	1
■ Realize multicast access points? . . . . .	1
■ Instead of controlling the forward-error correction? . . . . .	1
■ Phasellus libero ipsum, pellentesque sit amet, sem. . . . .	1

### Abstract

Rasterization and Smalltalk, while important in theory, have not until recently been considered important. Given the current status of wearable methodologies, analysts clearly desire the refinement of IPv4. Purr, our new heuristic for the producer-consumer problem [1], is the solution to all of these problems.

Are they polynomial time?

Realize multicast access points?

### 1 Introduction

Recent advances in certifiable symmetries and Bayesian technology synchronize in order to realize access points. This is a direct result of the construction of multicast algorithms. This is a direct result of the analysis of active networks. The emulation of suffix trees would profoundly improve congestion control [4].

Instead of controlling the forward-error correction?

To our knowledge, our work in our research marks the first method analyzed specifically for scalable models. Existing interactive and permutable methodologies use Smalltalk to measure the construction of the partition table. The disadvantage of this type of method, however, is that hash tables can be made real-time, cooperative, and reliable. Existing "fuzzy" and concurrent algorithms use the evaluation of multicast frameworks to request access points. On the other hand, distributed archetypes might not be the

Phasellus libero ipsum, pellentesque sit amet, sem.

## Spreadsheets with spreadtab

- ▶ Now that you've seen how  $\text{\LaTeX}$  can replace Word and PowerPoint, what about Excel?
- ▶ Homework: try the `spreadtab` package!

Thanks, and happy T<sub>E</sub>Xing!
