

## Math Club talk and bibliography Practice Assignment 5

Due: Week 7 Monday by 5:45pm (via Overleaf invite)

### **Setup:**

- Back up the work that you've done so far by going to `menu` and download `source`.
  - Using the “folder” icon, create a new folder called `assignment5` in the same project `MATH2794W YourName` (where you've kept all the files from your past assignments).  
Create a new file called `intro5.tex` in this folder and set it as your main file. You can use the template from Assignment 3.
  - Create a new blank `.bib` file in this folder.
1. Pick one of the first 5 talks from this semester (including this week's talk). Note: You don't have to pick this same topic for your final paper assignment.
  2. I have posted references (courtesy of the speakers) from each talk on our class schedule page. Your task is to check out two or more references from the library resources (see the resources from assignment 3). Note: If you find good references which are not on the list, please share them with me.
  3. Use your notes from the talk and the references to either write a formal summary of the talk itself or on ideas or facts (which you learn from the references you check out) related to the talk.

Your assignment should include the following:

- An concise abstract which informs the reader about the body of your work
- A short introduction section
- The body of the paper
- A short concluding paragraph or section
- References section created using a `.bib` file

The length of your summary should be 1 or 2 pages, not including the abstract, table of contents, and references list.
