Part 1: An Introduction to Dynamical Systems

Part 2: What is Chaos?

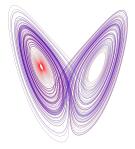

Part 3: Examples of Chaotic Dynamics

Dynamical Systems

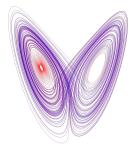

Dynamical System: A system that describes a quantity that is evolving in time.

A D > A D > A D > A D >

3

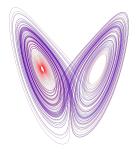

Dynamical Systems

Dynamical System: A system that describes a quantity that is evolving in time.

 Differential Equations: Useful for quantities that evolve continuously over time.

Dynamical Systems

Dynamical System: A system that describes a quantity that is evolving in time.

- Differential Equations: Useful for quantities that evolve continuously over time.
- Difference Equations: Useful for quantities with generational dependence (discrete steps with finite size)

Differential Equations (DE)

- Applications: Physics, Engineering, Economics, etc
 Solve the Initial Value Problem (IVP):
- Solve the Initial Value Problem (IVP):

$$\frac{dy}{dx} = \frac{1}{2\sqrt{x}}, \quad y(1) = 1$$

The solution is a function y(x) satisfying $\frac{dy}{dx} = \frac{1}{2\sqrt{x}}$ and y(1) = 1

Numerical Approximations

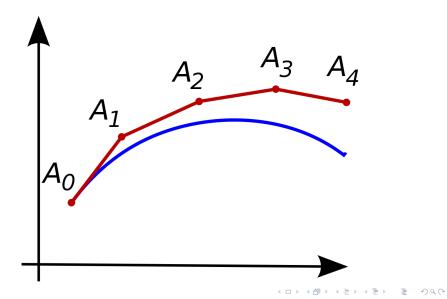

- Most DE's <u>cannot</u> be solved so cleanly
- Consider the general DE:

$$\frac{dy}{dx} = f(x, y), \quad y(x_0) = y_0$$

▲□▶ ▲□▶ ▲ 臣▶ ★ 臣▶ 三臣 - のへぐ

Numerical Approximations with Euler's Method

Numerical Approximations

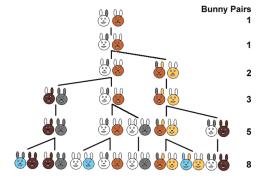

Difference Equations (ΔE)

 Applications: Biology, entomology, epidemiology, economics, chaos, etc.

- Can be derived from DE's
- △E's are **recurrence relations**
- A solution to a ΔE is a sequence of points

The Fibonacci Sequence

Fibonacci Sequence

 $x_{n+1} = x_n + x_{n-1}$

$$n = 0, 1, 2, \dots$$

$$x_0 = 1, \ x_{-1} = 1$$

$$x_{n+1} = f(x_n), \quad n = 0, 1, 2, ...$$
 (1)

・ロト ・ 日 ・ モ ト ・ モ ・ うへで

$$x_{n+1} = f(x_n), \quad n = 0, 1, 2, ...$$
 (1)

Positive Orbit: For $x_0 \in \mathbb{R}$ the positive orbit is

$$\gamma^+(x_0) = \{x_0, f(x_0), f^2(x_0), ...\}$$

$$x_{n+1} = f(x_n), \quad n = 0, 1, 2, ...$$
 (1)

▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□▶ ▲□

Positive Orbit: For $x_0 \in \mathbb{R}$ the positive orbit is

$$\gamma^+(x_0) = \{x_0, f(x_0), f^2(x_0), ...\}$$

Equilibrium Points: \bar{x} is equilibrium point if $\bar{x} = f(\bar{x})$

$$x_{n+1} = f(x_n), \quad n = 0, 1, 2, ...$$
 (1)

Positive Orbit: For $x_0 \in \mathbb{R}$ the positive orbit is

$$\gamma^+(x_0) = \{x_0, f(x_0), f^2(x_0), ...\}$$

- **Equilibrium Points:** \bar{x} is equilibrium point if $\bar{x} = f(\bar{x})$
- **Periodic Point:** \bar{x} is of period p if $\bar{x} = f^p(\bar{x})$

$$x_{n+1} = f(x_n), \quad n = 0, 1, 2, ...$$
 (1)

Positive Orbit: For $x_0 \in \mathbb{R}$ the positive orbit is

$$\gamma^+(x_0) = \{x_0, f(x_0), f^2(x_0), ...\}$$

- **Equilibrium Points:** \bar{x} is equilibrium point if $\bar{x} = f(\bar{x})$
- **Periodic Point:** \bar{x} is of period p if $\bar{x} = f^p(\bar{x})$
- **Global Dynamics:** Determine behavior of $\gamma^+(x_0)$ for any choice of x_0 .

2D System of Difference Equations:

$$x_{n+1} = f(x_n, y_n), \ n = 1, 2, \dots$$

 $y_{n+1} = g(x_n, y_n)$

- Associated Map: $T : \mathcal{R} \to \mathcal{R}$, T(x, y) = (f(x, y), g(x, y))
- **Positive Orbit:** For $(x_0, y_0) \in \mathbb{R}^2$ the positive orbit is

$$\gamma^{+}(x_{0}, y_{0}) = \{(x_{0}, y_{0}), T(x_{0}, y_{0}), T^{2}(x_{0}, y_{0}), ...\}$$

Global Dynamics: Determine behavior of $\gamma^+(x_0, y_0)$ for any choice of (x_0, y_0) .

Predict the global dynamics of the system!

Deterministic vs. Stochastic Dynamical Systems

What's the Difference?!

▲□▶ ▲□▶ ▲ 臣▶ ★ 臣▶ 三臣 - のへぐ

What's the <u>Difference</u>?!

 Deterministic: The output/ behavior of solutions to a model are *fully* determined by the parameters and the set of initial conditions.

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

What's the Difference?!

- Deterministic: The output/ behavior of solutions to a model are *fully* determined by the parameters and the set of initial conditions.
- Stochastic: (AKA Probabilistic) There is a probability associated with different outputs/ behaviors so the same set of parameters and initial conditions can lead to a bevy of different outputs.

Determinism: Laplace's Superman

We may regard the present state of the universe as the effect of its past and the cause of its future. An intellect which at a certain moment would know all forces that set nature in motion, and all positions of all items of which nature is composed, if this intellect were also vast enough to submit these data to analysis, it would embrace in a single formula the movements of the greatest bodies of the universe and those of the tiniest atom; for such an intellect nothing would be uncertain and the future just like the past would be present before its eyes.

The Art of Prediction

The ideal situation:

- **1** Same causes always produce the same effects.
- 2 Like causes always produce like effects.
